Advanced SQL for Data Professionals

How do you move beyond SELECT, WHERE, GROUP BY Queries? How to solve SQL questions asked in FAANG interviews?

We've all been there... As a data professional, you need to learn Advanced SQL. The Biggest Problem — there is no good source to find all the good questions.

This blog is a collection of content that I would have like to see in a go-to guide for SQL.

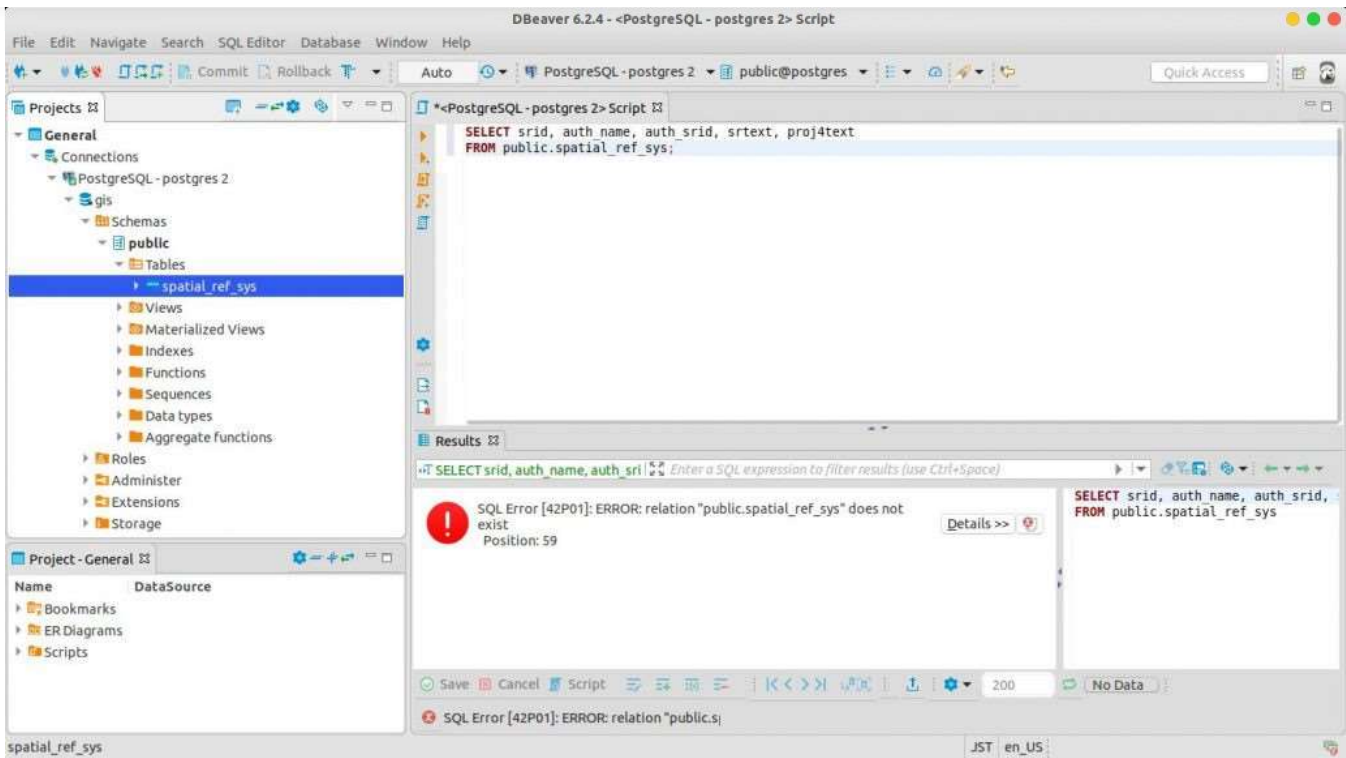

After going through all these, You'll be able to solve around 95% of all SQL questions that may be asked.

Here is a stepwise process :

Step 1 : Install MySQL client on your system. I recommend using ubuntu(or linux) to

Some Concepts you should know :

- **CTEs** : Helps in creating temp tables in queries and using them later (Common Table expressions)
- **Subqueries**
- **Variables in SQL**
- using **CASE WHEN**, **IF** statements, **substring** and **date functions**.
- **Window functions**
- **Using joins** to solve non trivial problems.

Step 3 : Hackerrank (3–4 hrs)—

Solve Easy-medium questions that have a high success rate. Don't beat yourself up if you can't solve *all* at this point — you are still warming up. *Solve 30–40 % of all questions present.*

use discussions tab to learn and see alternate solution approaches — you are still a learner

Step 4 : Complete this list in a sequential order :

Learn the common approaches used to solve almost every SQL problem :

1. Update Cumulative Sum
2. Monthly Active User
3. Pivot Numeric Data
4. Pivot Text data
5. Un-pivot tables
6. Group by bins
7. Recommended friends
8. Consecutive active users
9. Spotify similar friends
10. Text Confirmation

14. [Instagram Common follower](#)

15. [FB Advertiser status](#).

Special Tricks to know that come in Handy with SQL problems :

1. [Useful subqueries](#)
2. [Multiple column partition](#)
3. [Dynamic query\(Python\)](#)

Suggested questions for practice :

1. [Trips and users](#)
2. [Dept top 3 salaries](#)
3. [Cumulative salary employee](#)
4. [Human Traffic](#)
5. [Average salary](#).
6. [Students Report](#)

I also suggest you to read this doc on [Query Optimization](#) .

Step 5 : Continue with the remaining SQL questions on HackerEarth. Make sure to revisit completed ones again.

That's it !! you covered 90% of all Advanced SQL Content you need. Now go ahead with confidence and rock that interview.
